

Kurkjian and Zelen (,) introduced a tensor calculus for factorial arrangements which, as pointed out by Federer (), represents a powerful. Abstract. Consider a factorial experiment involving n factors, F_1, F_2, \dots, F_n , at m_1, m_2, \dots, m_n (?2) levels respectively. Let the levels of F_i be coded as $0, 1, \dots, m_i$.

CALCULUS FOR FACTORIAL ARRANGEMENTS These are taken to satisfy the usual linear constraints that the sum over the levels of any factor is zero.

This paper introduces a special calculus for the analysis of factorial experiments. The calculus applies to the general case of asymmetric factorial experiments. **A Calculus for Factorial Arrangements**. Front Cover. Sudhir Gupta, Rahul Mukerjee.
